Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Regarding the status of the claims in the instant application, the Examiner has made an updated search and found new prior art. The Examiner is obliged to apply the newly found prior art. The Examiner regrets the delayed process of the application. Accordingly, claims 6-10 remain pending in the application.

CLAIM REJECTION 35 USC 103 (a)

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 6-10 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Levergood et al. (U.S. Pat. No. 5,708,780) in view of Lemon et al. (U.S. Pat. No. 4,674,041).

As per claims 6-10 Levergood substantially discloses a method/system for controlling and monitoring access to network servers see., abstract which is equivalent to Applicant's claimed invention wherein it is stated that a data processing for supporting web based commerce and commission tracking on a multi-node network), comprising:

One or more content providers with web pages wherein said web pages include linking instructions associated with select promotions a plurality of web pages within the multi-node network, wherein each of the plurality of web pages displays at least one on-line

content (see., col 1, lines 50-67, col 2, lines 1-55, specifically wherein said company may want to provide highly specific service tips over its internet server only to customers having service contracts or accounts, and also col 3, lines 56-67, col 4, lines 1-31, col 2, lines 56-67, figs 1 and 2A);

Merchant sites interconnected to said network and available for providing goods and/or services to users referred to said merchant site by said linking instructions (see., Levergood in the abstract, specifically wherein it is stated that the hypertext environment, a client views a document transmitted by a content server with a standard program known as the browser. Each hypertext document or page contains links to other hypertext pages which the user may select to. A user is provided with a session identification which allows the user to access to the requested file or page. see., col 5, lines 17-41, col 7, lines 22-48. Levergood further discloses a plurality of client/servers which can also be a clearinghouse server or merchant sites and the step of displaying promotions is disclosed in col 5, lines 17-41.

It is to be noted that Levergood fails to explicitly disclose wherein said clearinghouse comprising programming for detecting fraudulent activity relating to said promotions and tracking users promotions. However, Lemon discloses a method/apparatus for monitoring and controlling the distribution of coupons or promotions. A report 4 includes the number of coupons or promotions dispensed, the store identification information, the dataes and times of distribution, and customer identification data. This information is valuable to the manufacturer both as an aid in analyzing its marketing technique and in detecting fraudulent coupon distribution (see., abstract, col 3, lines 39-54). Therefore, it

would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the internet server of Levergood by including the limitation detailed above as taught by Lemon because this would control the number of coupons or promotions issued an/or redeemed.
